What the dashboard does

01

Summarises activity

Shows sales, order activity, and product records at a glance.

02

Compares performance

Breaks sales down by month, region, category, and segment.

03

Supports exploration

Uses a Region → Category → Segment slicer to narrow the view.

One page, several perspectives

Headline cards

Sales · Orders · Products

Monthly line chart

Sales by order-date
month

Category columns

Sales by product
category

Region bars

Sales by geographical
region

Segment donut

Sales share by customer
segment

Sales and order-record
mix

Filter control: Region → Category → Segment

What the headline cards count

Total Sales	Sum of Sales	Adds sales values in the current filter context.
Total Orders	Distinct count of Order ID	Counts unique order IDs, not individual order lines.
Total Products Sold	Count of nonblank Product ID	Counts product-ID records, not units or unique products.

Interpretation matters: “Total Products Sold” is a record count, not a quantity measure.

How the dashboard works

01

Read the data

Reads fields from the superstore table.

02

Aggregate

Sales is summed; IDs are counted for the cards.

03

Select a slice

Choose Region, Category, or Segment in the slicer.

04

Compare the view

Read totals and chart distributions.

Monthly sales: check the year context before interpreting trends.

From sales data to focused questions

01 Where should we look?

Compare sales by region and category.

02 Who drives the mix?

Review customer-segment sales shares.

03 How is activity distributed?

Compare month and shipping-mode patterns.

The value: one filtered view for a clear, consistent sales discussion.
